

Modeling & Simulation as a Service (MSaaS)

- "Hi I'm Carrie White with 'IT sec TV' and I'm here with general Henrik Summer at the focus event: Cloud-based simulation-hype or reality? General, thank you for joining me."

- "Thank you very much for inviting me to this interview."

- "So what did you cover during this focus event?"

- "We covered modernly simulation as a service, which is a concept, that will make modeling assimilation available in a more easy and more flexible way to the users across the world basically. So what we're looking at here is there a concept, I will call it an app store for modeling in simulation services. Modeling simulation could be available on a new cell phone, in your home country, but also on operations."

- "Great, what a wonderful concept, general summer thank you for talking with me"

- "John, you were one of the presenters today, correct?"

- "yep"

- "wonderful, and what were you discussing?"

- "We're discussing the maturity of some of the cloud-based approaches, in terms of delivering our future simulation needs. Some of the technologies are starting to be taken on by many companies, but I think we continue to work together, then we need to sort of champion this approach in more strategically across NATO and its nations and within industry, to make sure the benefits are realized or understood so that people can really get involved in and help develop this further."

- "Wonderful, John thanks for speaking with me, I hope you have a great rest of the show."

- "Thank you very much."

- "I'm Kerry White with 'IT set TV' stay tuned for more."
