Background

- ➤ The Military Suicide Research Consortium (MSRC) was established by the U. S. Department of Defense in 2010
- To coordinate and oversee scientific research on the full range of the problem of suicide in the military
- Organized into four Cores to facilitate efficient management of the research program and other functions

Standard Operating Procedures

- Facilitate management of large, diverse organization
 - key staff in 3 locations in the U.S., graduate students and post-doctoral fellows at several additional institutions, suicide research expert members at U.S. and international universities and multiple U.S. military installations
- Developed and regularly updated for all key functions

Training Program

- Graduate students and post-doctoral fellows
 - Includes joint MSRC-Army Study to Assess Risk and Resilience in Servicemembers (Army STARRS)
- American Association of Suicidology preconference training day
- Dissertation completion awards
- ➤ Training and supporting the next generation of U.S. military suicide researchers

Accomplishments 2010-2015

- Rapid response to white paper requests
- Streamlined approach to soliciting and reviewing proposals
- 24 investigator-initiated studies
- Mobile application, a computer intervention, manuals for treatment, peer-reviewed journal articles, and conference presentations

2016 and Beyond

- Solicited letters of intent for two separate calls for proposals
- > Two projects in contracting phase
- ➤ Reviewing second round of letters of intent, anticipate inviting up to 35 proposals
 - Includes analyses of common data elements
- Significant dissemination and implementation efforts

Conclusions

- Operationally lean, scientifically rigorous, efficient, and able to significantly leverage available funding
- Wealth of actionable findings
- Model can be adapted to produce similar results for other countries' militaries
- Manual for successfully establishing and running consortia forthcoming
