Modafinil in F-16 operations during ATF-ME

A pilot study

Center for Man in Aviation Aviation Medicine Major Yara Wingelaar-Jagt, Flight Surgeon RNLAF

March 19 2019

Contents

- The problem
- Pilot study
- Results ground-trial
- Results in-flight
- Future research

Pilot study

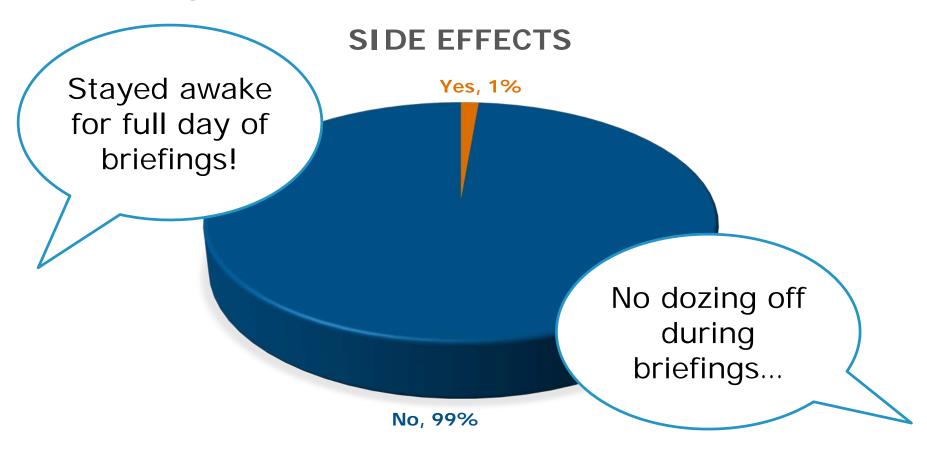

Ground-trial first

• Then freely usage in-flight

• Each time Modafinil is taken, evaluation afterwards

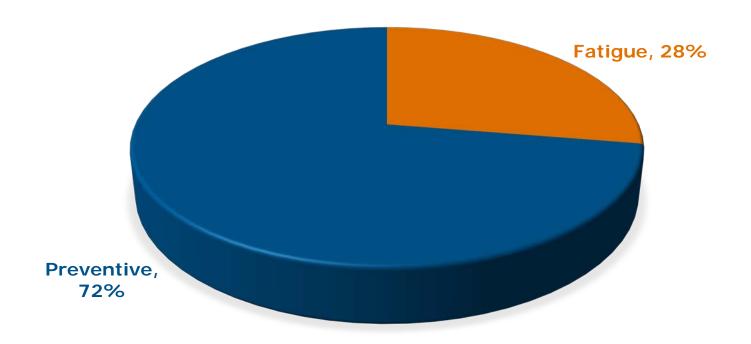

Results ground-trial

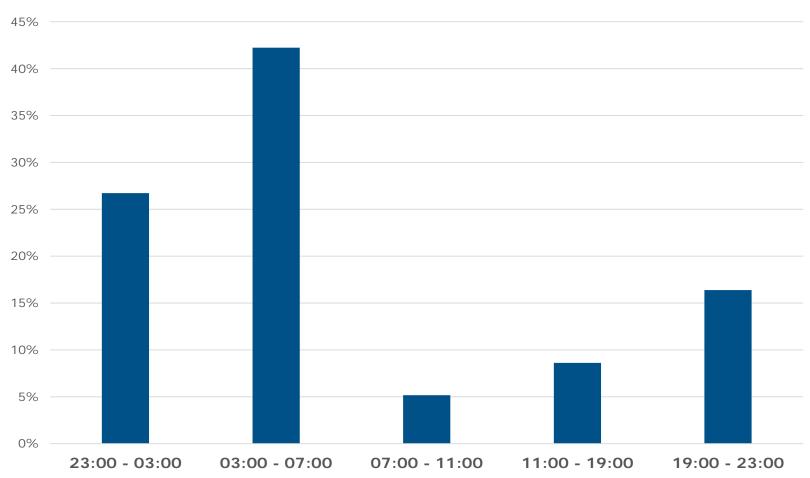

Results in-flight

REASON FOR TAKING MODAFINIL

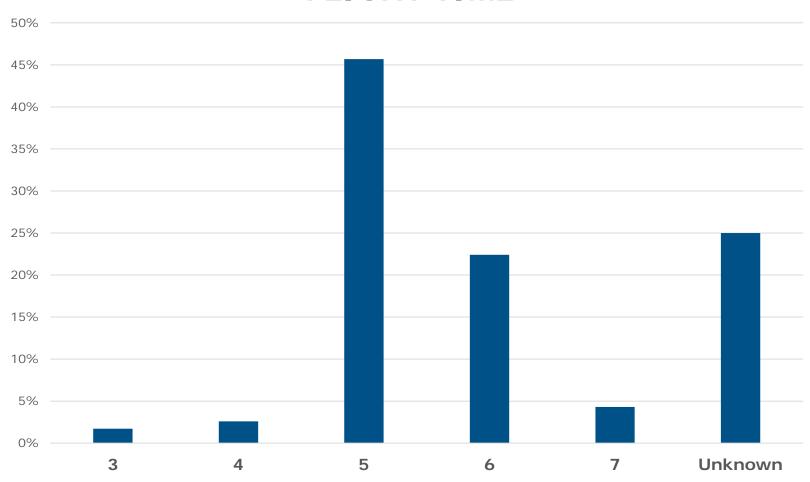

T/O TIME

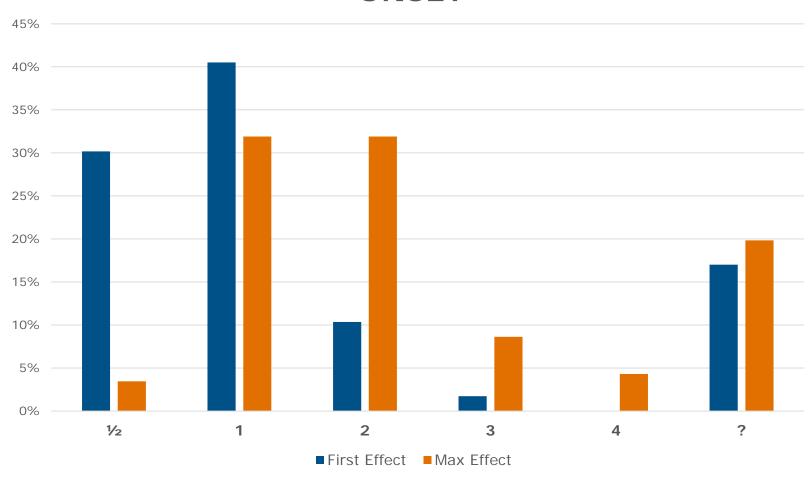

FLIGHT TIME

ONSET

Conclusion Pilot study

Good effect on concentration and vigilance

• (Almost) no side-effects

Maximum effect between 1 and 2 hours

Still questions remain

Future research

- Double-blind, cross-over, randomized controlled trial
 - Modafinil vs caffeine vs placebo
- Staying awake for 24 hours (3 times)
 - Nightly vigilance tests
 - 4 blood samples (modafinil and caffeine)
- 30-36 subjects (Aircrew members)
- Starting in April 2019
