Data

Blockchain Revolution

Putting Blockchain to use in NATO

Blockchain Col

Blockchain Definition

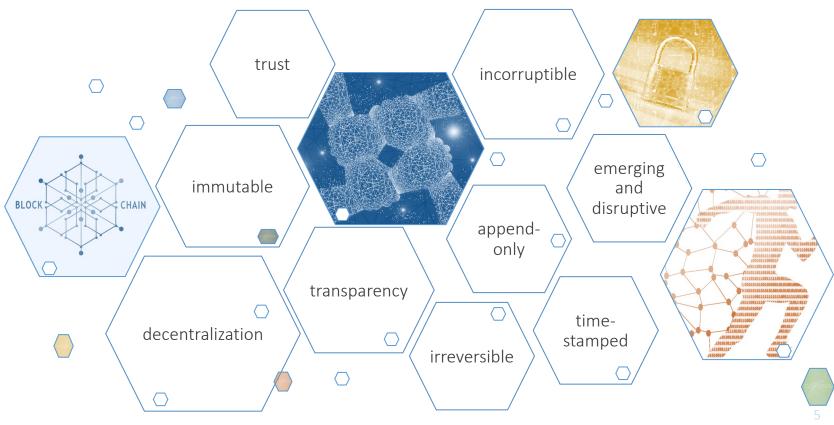

A business network that is used between peers to exchange value. Value can be currencies, tracking information, or anything that interested parties require to be maintained on the blockchain ledger.*

A distributed digital military ledger that is used between nations of alliances to exchange defence logistics value. Defence logistics value can be recognized logistics picture, asset tracking information, cross border paper-based documents, or anything that interested military units require to be maintained on the blockchain ledger to improve digital backbone of sustainability.

Blockchain Technology Features

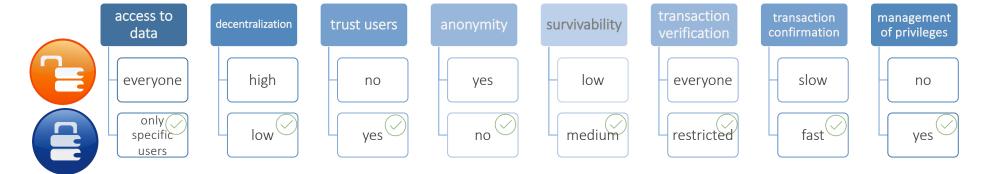

Blockchain Technology Awareness-2

Blockchain Technology Applications and Opportunities

Blockchain Technology Key Actors

Transformation in NATO Logistics

...the existence of operational necessity for digital transformation to achieve cross-domain operations, optimize effects and to conserve Command and Control superiority

SACT, General Philippe Lavigne

...transforming the Alliances from a platform centric organization to a secure data centric organization.

..interoperability still remains essential for success, but it is not an obstacle

DCOS CD, Lieutenant General David Julazadeh

Where are we in NATO Logistics?

data demand

advanced, trustable, interoperable software systems

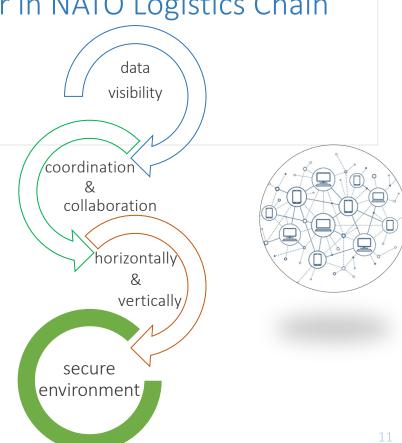

high security concerns

common data language for military and non-military partners

Decentralized and Trustable Ledger in NATO Logistics Chain

Transformation in NATO Logistics-3

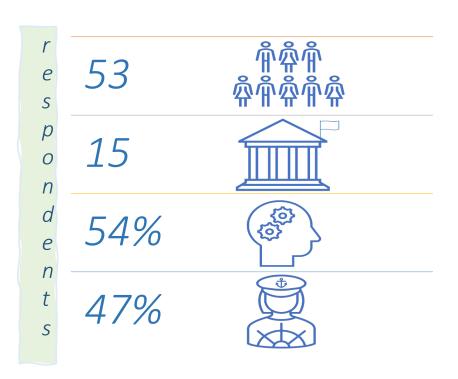

How can we transform and develop

NATO

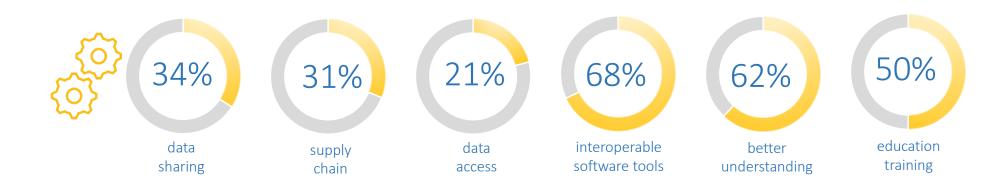

logistics capabilities

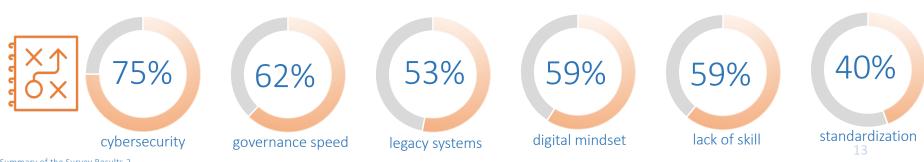

by using

blockchain?

Summary of the Survey Results-2

Conclusion

diversified technology portfolio

blockchain technology pros & cons

decentralized & trustable ledger

terminology & standards

humble ledger in NATO logistics chain
