

Distribution Statement A: Approved for public release.

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Real-time Spatial Tracking as a Paradigm Shift for Next Generation Handheld Explosive Hazard Detection (HH-EHD) Technologies

Brian Burns, William W. Clark, Corey Shpil, and Christopher Marshall
US Army RDECOM CERDEC NVESD

01 Jun 2017

U.S. ARMY
RDECOM

The Threat

- **New and evolving target types**
 - Metallic and non-metallic
 - Manufactured and improvised
 - On route, off route emplacements
 - Urban and rural

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

U.S. ARMY
RDECOM

Handheld Position Sensing Technology Thrust

- **New potential for improved Handheld Explosive Hazard Detection (HH-EHD)**
- **Precise positioning**
 - Position (x,y,z) and Attitude (pitch,roll,yaw)
 - Position and Attitude together are “pose”
 - Require sufficient precision to resolve sensor responses
 - Enables new algorithms for handheld detection
 - Multi-sensor fusion
 - Threat imaging
- **Collect data from multiple sensors with precise position and attitude (pose information) to support algorithm development and evaluation.**

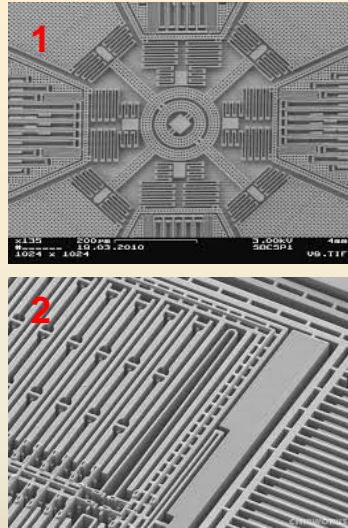

Enabling Technologies

- MEMS devices
- CMOS sensors
- Fast CPUs

2. http://qcn.stanford.edu/wp-content/uploads/2011/11/Kionix_MEMS_cross_branded.jpg
3. <http://artofcircuits.com/wp-content/uploads/2014/04/Camera-Sensor-OV7660.jpg>

Candidate Sensor Types Assessed:

- MEMS Gyro/ Accelerometer
- Color camera
- Structured Light camera
- Laser rangefinder
- RADAR
- Magnetometer
- GPS
- Passive Radio Frequency Triangulation
- Optical mouse
- Acoustic ranging

MEMS Accelerometers with Camera based Optical Odometry Demonstrated

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

U.S. ARMY
RDECOM

Data Collection

- **Robotic Collection Cart**

- Position and Attitude (pose)
 - Cart pose from GPS/IMU
 - Sensor pose relative to cart during sweep from arm joint positions
- Sensors
 - Ground Penetrating Radar
 - Multi-frequency Metal Detector
 - Pulse Induction Metal Detector

- **Test Site**

- US Temperate Region Site
- Target set included Anti-personnel (AP) and Anti-Tank (AT) mines, metallic and non-metallic Improvised Explosive Device (IED) types, pressure plates, and wires

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

RDECOM

Real-time Spatial Location (1/3)

★**GERDEC**
U.S. ARMY - DEVCOM

- Provides real-time position and orientation (pose)

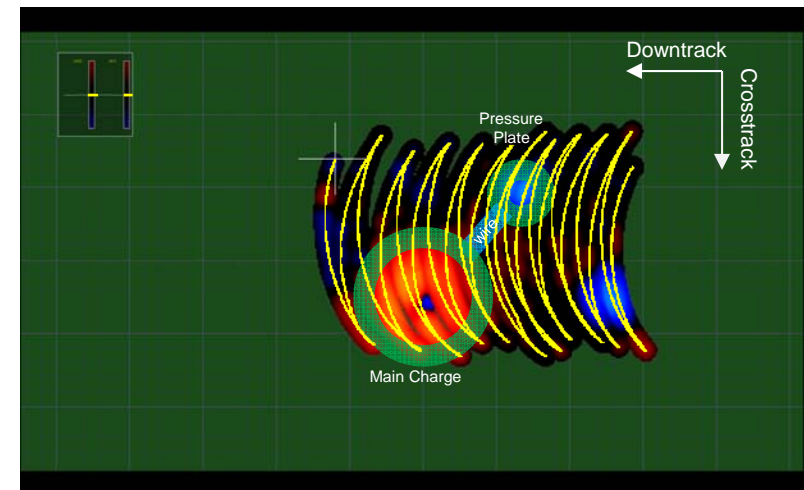

- Enables sensor fusion

- Improve detection using information from complementary sensor types
- Can align data from multiple sensors

- Enables Advanced Algorithms

- Allows 2-D images
- Use spatial context to detect multi-component threats
- Allows 3-D imaging

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

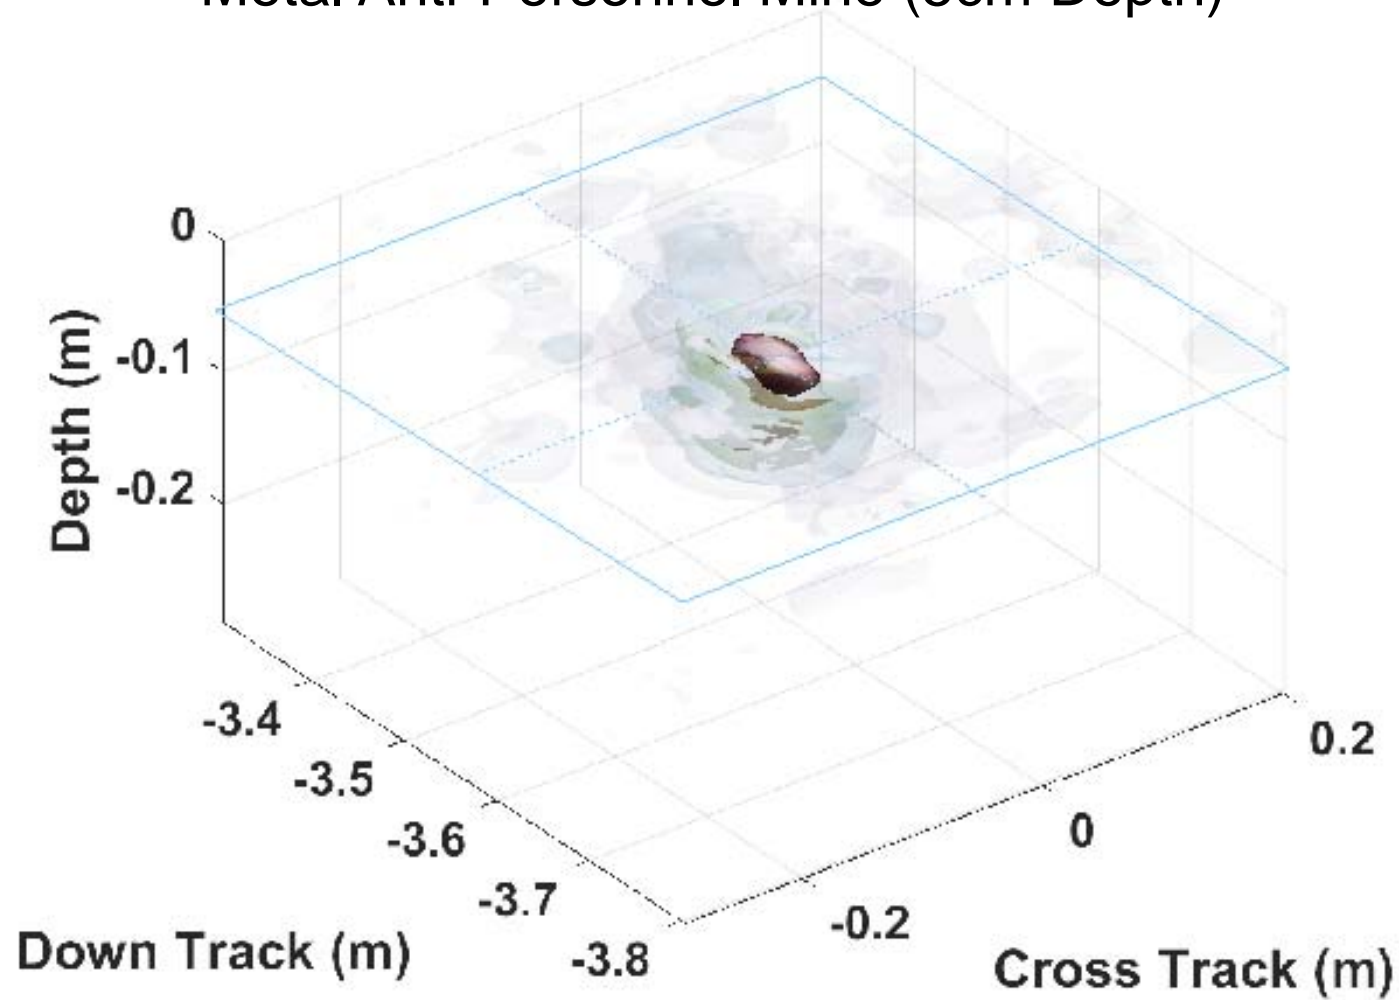

U.S. ARMY
RDECOM

3-D Handheld Radar Image Formation

Metal Anti-Personnel Mine (5cm Depth)

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

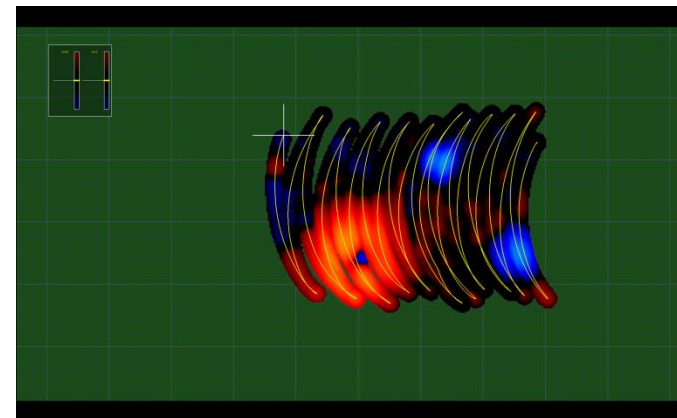

Real-time Spatial Location (2/3)

Improved Usability

- Direct “heads up” display of sensor response to soldier
- Simplified user controls using position as context for operation commands

Real-time Spatial Location (3/3)

Training Improvements

- Display sweep image for immediate feedback
- Sensor can compensate for sweep variation between operators
 - Operators are not forced to learn a uniform sweep for correct functioning
 - Sensor can adapt to variations in *usage* by operators
- Reduces training burden
 - Less time to learn mechanics of swing
 - Intuitive operation using context and position
 - Allows for field training with or without an instructor

U.S. ARMY
RDECOM

Conclusions

- **New HH-EHD detection algorithms**
 - Adaptive operation
 - Multi-sensor fusion
- **Intuitive operation and live visual feedback**
- **2-D and 3-D Imaging for Handheld Algorithms and Display**

Real-time Spatial Location Tracking Enables Next-Generation HH-EHD Technology

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.
